Internship Hiring Manager  
Casper  
New York, NY  
USA

Dear Internship Hiring Manager,

It was one my most memorable moment of life, when our team recently won a national level Hackathon, which was organised by NSUT (earlier NSIT) one of prestigious engineering institution in India.

It was not at all accident. We had a goal in our mind and just needed to put the required headwork into the idea. And By the way Creating cool and useful stuff has been my passion from childhood. I knew that my curriculum at my college is not composed of topics that I want to learn. So I learnt that topics my self by means of book and online tutorials. I believe on a simple principle that - Everything before being done seems to be impossible. So we just need to be determined enough to reach the goal. I don't get satisfied by what I have rather I get satisfied by achieving things that I want. Some of ways I learnt my skills are -

- Reading numerous books on Web technologies and building things entirely from scratch.
- Contributing to college projects.
- Participating in Hackathons where we get to know new people and learn new things from them.

When I came across your internship, I got really excited as it gives me opportunity to meet new people and work with them, and most importantly to work in an excellent firm that values quality. And I like to build quality products too. I am proficient in using CSS, React and Node. And can design highly reactive and interactive components using them pretty quickly. More detailed description of my skills can be found in my Resume or my Website.

I would love to put my passion and skill to work for you.

Thank you for your time, I am looking forward to hear from you.

Best Regards,

Jatin Kumar
